# Working with researchers

- Use independent international experts
- A matter of quality
- To prevent issues of inhabilitation
- Avoid the "normal" applicants/grant recipients
- Only use them for evaluations of structural issues

# Funding partners

- Take the lead in the process!
- Your own staff should have high academic competence, Ph.D. is a minimum
- Study the charter/instructions for your funding partner
- Be aware of differences between foundations/public funders
- Differences between your national and your international funding partners!

**Thank you!**
